PROFESSIONAL SUMMARY

Java Full Stack Developer | Spring Boot | Microservices

Result-driven Java Full Stack Developer with 2+ years of professional experience designing, developing, and deploying scalable microservices and modern web applications. Proficient in the Spring Boot ecosystem, relational/NoSQL databases, and cloud-native engineering on AWS, with hands-on experience integrating Generative AI (LLMs, RAG) into enterprise systems. Proven track record of optimizing API latency and delivering high-throughput applications that drive business value.

TECHNICAL SKILLS

- **Core Java:** OOP Concepts, Collections Framework, Generics, Java 8 Features (Lambda Expressions, Stream API, Functional Interfaces, Optional), Multithreading & Concurrency, Exception Handling, Java I/O, JDBC, JVM Basics (Memory Management, Garbage Collection), Data Structures & Algorithms, SOLID Principles
- **Backend & Frameworks:** Java (8/11/17), Spring Core, Spring Boot, Spring MVC, Spring Security, Spring Validation, Spring AOP, JWT, RBAC, RESTful Web Services, WebSockets, WebRTC, Microservices
- **ORM & Databases:** Spring Data JPA, Hibernate, MySQL, PostgreSQL, MongoDB, MongoDB Vector Search
- **Caching & Messaging:** Redis, Apache Kafka, RabbitMQ, Spring Kafka, Spring AMQP
- **Frontend Technologies:** Angular, React.js, JavaScript (ES6+), TypeScript, HTML5, CSS3, Tailwind CSS
- **Generative AI & ML:** LLMs (OpenAI, Gemini), RAG, Prompt Engineering, LangChain, Vector Embeddings, Vector Search, AI Agents, Tool Calling, LLM Evaluation, Spring AI
- **Cloud & Tools:** AWS (IAM, EC2, S3, RDS, SQS, ECS, Lambda, Cognito), GCP (Cloud Run, Cloud Scheduler, Vertex AI), Docker, Git/GitHub, GitHub Actions (CI/CD), Maven, JUnit, Mockito, Postman, n8n

PROFESSIONAL EXPERIENCE

Software Engineer Intern | mple.ai | Mumbai

Jan 2026 – Jun 2026

Technologies used: TypeScript, Next.js, Node.js, React, MongoDB, MongoDB Vector Search, DuckDB, OpenAI API, AWS (SQS), GCP, LangChain, WebSockets, WebRTC, FFmpeg

- Built a real-time AI coaching platform using Next.js/React.js, WebSockets/WebRTC and OpenAI APIs for low-latency audio/video interactions.
- Designed RAG pipelines using LangChain and Vector Search with semantic chunking to process and embed 500+ page enterprise PDFs while maintaining relevant context.
- Built an event-driven backend using AWS SQS for asynchronous ML workloads and a Fluent-FFmpeg microservice for automated PPT-to-Video generation with AI TTS, improving processing throughput.
- Developed a high-performance analytical dashboard (React.js, DuckDB, MongoDB) with cron-based automated reporting, and delivered the end-to-end "Assessment-in-Assignment" feature with JWT-based authentication.

Java Full Stack Developer (Full-time) | One Roof Web | Lucknow

Jun 2022 – Sep 2024

Technologies used: Java, Spring Boot, Spring Data JPA, Hibernate, REST APIs, MySQL, Redis, RabbitMQ, Spring Security (JWT), React.js, Spring Scheduler, Docker, Apache PDFBox, Webhooks (Meta API), AWS S3, Maven, Git, JUnit, Mockito, Postman

- Developed and maintained enterprise web applications for three client projects using Java, Spring Boot, Spring Data JPA, MySQL, and React.js.

- Built secure RESTful APIs with JWT Authentication, Role-Based Access Control (RBAC), and third-party Webhook integrations.
- Optimized database performance by resolving Hibernate N+1 query issues and implementing Redis caching; collaborated cross-functionally on debugging, code reviews, unit testing (JUnit/Mockito), and API testing (Postman).

Key Client Projects:

B2B Multi-Vendor E-Commerce & Inventory Management Portal | *Team Size: 5*

Tech Stack: Java, Spring Boot, Spring Data JPA, Hibernate, REST APIs, MySQL, Redis, Spring Security (JWT), React.js

- Designed scalable backend modules for catalog, orders, and payments using Spring Boot, Spring Data JPA, and MySQL, supporting reliable transaction processing under application load.
- Implemented a Redis caching layer for frequently accessed product catalog data, reducing database load and improving API response performance.
- Secured endpoints with Spring Security and JWT, establishing RBAC for Customers, Vendors, and Administrators; built responsive React.js dashboards for inventory and order management.

Enterprise HRMS & Payroll System | *Team Size: 5*

Tech Stack: Java, Spring Boot, Microservices, Spring Data JPA, Hibernate, REST APIs, Spring Scheduler, MySQL, Docker, Apache PDFBox

- Contributed to the phased transition of a legacy HRMS application toward a modular Microservices architecture, improving maintainability and deployment flexibility.
- Configured automated cron jobs using Spring Scheduler (@Scheduled) to process monthly payrolls for 5,000+ employees and generate PDF slips with 99.9% accuracy.
- Containerized the application ecosystem using Docker, ensuring uniform environments across staging and production.

Digital Marketing Campaign & Client Reporting Platform | *Team Size: 5*

Tech Stack: Java, Spring Boot, Spring Data JPA, Hibernate, REST APIs, MySQL, RabbitMQ, Webhooks (Meta API), AWS S3, React.js

- Built an internal agency platform (Spring Boot, MySQL) to manage multiple client campaigns, aggregating cost-per-lead, impressions, and conversion metrics.
- Integrated Meta Webhooks for real-time lead events and implemented async background processing via RabbitMQ for report generation, storing exports in AWS S3.
- Developed drill-down React dashboards with strict RBAC, ensuring account managers view only their assigned clients' performance data.

PROJECTS

BidStream – AI-Powered Live Auction Platform | Live | GitHub

Tech Stack: Java, Spring Boot, Spring AI, Apache Kafka, React, MongoDB (Vector Search), MySQL, Google Gemini API, WebSockets (STOMP), Redis, Tailwind CSS

- Built a live auction platform using Spring Boot, WebSockets (STOMP), and Redis, implementing distributed locking for low-latency concurrent bid execution with anti-sniping protection.
- Designed an event-driven architecture using Apache Kafka to asynchronously process high-volume transactional bid streams and escrow payment logic.
- Integrated an "AI Auctioneer" using RAG via Spring AI and Google Gemini with MongoDB Vector Search, to verify and answer buyer queries from product provenance PDFs.

ExerLytix – AI-Powered Fitness Tracker | Live | GitHub

Tech Stack: Python, Flask, OpenCV, MediaPipe, Spring Boot, REST APIs, React.js, MySQL, Spring Security, Chart.js, Tailwind CSS

- Developed a health platform with a custom Python/MediaPipe vision engine tracking body-part angles for real-time posture correction and exercise rep counting.
- Built a Spring Boot backend (JWT-secured) integrated with the Python ML microservice via REST APIs, and a React.js dashboard for food calorie search and BMI tracking.

EDUCATION

Master of Computer Applications (MCA) *2024 – 2026*

Vivekanand Education Society's Institute of Technology (VESIT), Mumbai | CGPA: 9.12/10

Bachelor of Computer Applications (BCA) *2019 – 2022*

Tilak Maharashtra Vidyapeeth University, Pune | CGPA: 8.52/10

CERTIFICATIONS & COURSES

- **Spring Boot with Microservices** | AshokIT Software Training Institute
- **Programming in Java** | IIT Kharagpur (NPTEL)
- **AWS Academy Machine Learning Foundations** | AWS Academy Graduate
